

Samukelo Mngadi

Business Analyst | github.com/mngadisamu

Profile

Business Analyst who turns business problems into requirements, and requirements into working products. I gather requirements, map processes, and prototype AI-assisted solutions so stakeholders can react to something real before development starts.

Experience

Business Analyst Intern, MICT SETA

March 2025 - March 2026

- [Add a result: what you delivered, and who used it.]
- [Add a second result, with a number if you have one.]
- [Add methods or tools: BPMN, user stories, workshops.]

Business Analyst Learnership, UltimetaX

January 2023 - January 2024

- [Add what you learned or delivered during the learnership.]
- [Add a project or deliverable you completed.]

Projects

OOTD AI: fashion stylist chatbot

A chatbot that builds outfits from your own digital wardrobe, with a wardrobe manager, an inspiration hub that matches looks against what you own, saved outfits, and wear logs. I defined the features and user flows, then prototyped it with Google AI Studio and Gemini (React, TypeScript). Code: github.com/mngadisamu/ootd-ai-chatbot

[Business analysis case study title]

[Two or three sentences: the problem, what you did, and the outcome. Keep client details confidential.]

Skills

Business analysis: requirements gathering, user stories and acceptance criteria, process modelling, stakeholder communication.

Building with AI: prompting and iterating with Gemini, prototyping in Google AI Studio, React and TypeScript basics, Git and GitHub.

Tools: [Add: Jira, Visio, Excel, Power BI, etc.]
